1. **page.evaluate** - yeh chize leta hai ek function. aur yeh function browser mai run hota hai. aur iss function mai aap ko kuch parameters pass karne ho to woh kr skte ho. page.

   ```
   let value = await page.evaluate(function cb(element) {
        return element.textContent;
     }
        , element);
   ```

   function ke bad wala element maine pass kiya function mai.
   jo function (element) { } ke andar jo code hai woh iss element ke andar textContent nikal rha hai.

2. **Loader/Spinner** : page ke niche loader hota hai jo by default invisible hota hai . fir jab aap scroll krte ho to woh visible hojati hai aur aapke pas kuch content ajata hai , fir us page ka pura content aane ke bad phir se invisible hojati hai
